Description: This is the graph generated by screenshot without any rotation.

Description: This is the photo generated by command ./Rasterizer -r 20 image.png
It will rotate counter clockwise by 20 degrees according to the z axis.

Extra credit part:

Description: I use Rodrigues' rotation formula to generate the function get_rotation and this is rotation on a vector(1,1,0) counterclockwise by 20 degrees. I replace the get_model_matrix function with get_rotation function in the main() function.
